

ABSTRACT OF THE DISCLOSURE

Log information disappears when a host device storing the log information, which is histories of respective devices under connection, is disconnected.

5 Further, when USB or the like is used as an interface bus, supplied power has to be limited with consideration to the load on the power supply of the host device.

10 Therefore, here is a proposal of a system that permits succession of the history information of each device even if any device is disconnected and that permits efficient utilization of power.
